

Check Your **DRYER'S EXHAUST DUCT**

You may not normally look behind your dryer, but do you know what its exhaust duct is made of? If it's made of vinyl or foil, you're at risk for fire. Reduce your risk now and replace your vinyl, foil or plastic duct with a UL-approved, semi-rigid or solid aluminum vent.

The lint that accumulates in your dryer's exhaust can catch fire easily if the airflow is interrupted or the exhaust overheats. If the exhaust duct is made from plastic or vinyl, it's especially prone to failure. Replace yours with a new duct to keep your home and family safe.

Convenient Ways To Pay Your Bill

Bundle Your Billing & Payment Options

Want to simplify your life?

Get more control, have less paper clutter and take the guesswork out of balancing your monthly energy bills by enrolling in one, two or all three of our most convenient billing and payment options.

1. e-Bill Paperless Billing & Payment

Eliminate paper, postage and writing checks. When you enroll in **e-Bill**, you'll simply receive a monthly email reminder when your bill is ready for review and payment. You can also set recurring and automatic payments.

2. Automatic Payment

Already gone paperless? Now, go worry free! Sign up for **e-Bill** automatic payment to have your payment automatically withdrawn from your bank account each month.

3. Budget Billing

For added control and convenience, sign up for **Budget Billing**. It eliminates the highs and lows by keeping your energy bill stable from month to month — which makes it easier to balance your monthly energy bills.

Visit uppc.com/home/billing.aspx to sign up and learn more about your billing and payment options.

Online Store

Did you know lighting accounts for about 5% of your home energy use?

According to **energy.gov**, compact fluorescent lamps (CFLs) and light emitting diodes (LEDs) use about 25 to 80% less energy than traditional incandescent light bulbs, and last up to 25 times longer. It's time to flip the switch for energy savings through Efficiency UNITED's Online Store.

UPPCO and Efficiency UNITED offer energy-saving lighting products at greatly reduced rates. Reduced prices on bulbs can be found both in retail stores and from the comfort of your own home in the new Online Store. Simply visit efficiencyunited.com/shop, select UPPCO and you will quickly be on your way to purchasing the highest quality products at the lowest price. And, for a limited time, shipping is free on all orders. Get started today!

Efficiency UNITED is the name of a program designed to help you be more energy efficient. Funded by UPPCO customers, the program offers rebates on energy-saving products and information to help you save. Invest five minutes now, and save energy for a lifetime.

Be Safe Near Dam Sites

Outdoor enthusiasts can easily avoid injury by staying clear of dam sites when you're navigating or near Upper Michigan waters.

As part of our power generation infrastructure, UPPCO maintains hydroelectric stations and dams on public waterways throughout Upper Michigan. While dams are vital to our total electric supply, these facilities can be very dangerous to unwary visitors.

Please treat dams and surrounding areas with respect, and always exercise caution.

ON LAND

- Stay away from the edge of waters above and below dam facilities. Slippery surface structures can cause you to fall in and be injured or carried away by currents.
- Avoid dry riverbeds. Sudden discharges from dam gates and automatic generators can flood the riverbeds, turning them into rapidly flowing waterways.

FISHING, BOATING OR SWIMMING

- Pay attention to the warning signs, buoys and barriers UPPCO has installed, and stay a safe distance away.
- Stay clear of water below dams and of hydroelectric stations, where there can be sudden, turbulent discharges and potentially dangerous currents.
- Avoid spillways that can suddenly and unexpectedly discharge large amounts of water.
