Save with an UPPCO Energy Advisor

You're smart about saving money for your business. When did you last look at your energy usage and how to save on your energy bill? UPPCO, in partnership with Efficiency United, is here to help you. If you are on a commercial rate, you are eligible for a personal Energy Advisor, no matter the size of your business. Your personal Energy Advisor will provide expert advice to take the guess work out of lowering your energy usage. From assistance to plan development, here are a selection of Energy Advisor services available to you:

- Assist with rebate and incentive applications, so you can focus more time on your business and your energy-efficiency projects.

Are You Prepared for Summer Storms?

BEFORE

- Keep a battery-operated portable radio, TV or public alert device handy to hear weather forecasts and news bulletins.
- Have an adequate supply of the following on hand and readily available:
 - water
 - nonperishable food items
 - flashlights (make sure they are in working order)
 - extra batteries
 - first-aid supplies/kit
- Ensure your vital medications are readily available.
- Have a plan to move yourself and your family (including pets) to another location in case you experience an extended power outage or must evacuate. Plan for any special needs family members have.
- Monitor TV, radio and public alert devices for weather updates and news bulletins.
- Generator Safety: Read and follow installation and operation instructions that came with the generator. Some generators can be permanently connected to your electric system to energize your home's wiring in the event of a power outage. This type of setup requires a safety transfer switch, which can be installed by a licensed electrician.

AFTERWARDS

DURING

- If you experience a power outage, you can report it from:
 - Your account using the UPPCO Customer Online Portal (**recommended**)
 - By Calling UPPCO at 906-449-2011 or 800-562-7809
- Check for outage updates at uppco.com and on Twitter @UPPCO.
- Stay away from downed or sagging power lines. Do not touch anything that is near them, such as trees, limbs, cars or ladders. Report the problem to UPPCO.
- Always assume downed lines are energized.
- Keep children and pets away from areas where lines may have fallen.
- Do not try to cut or remove downed trees or branches unless you are absolutely certain power lines are not involved. A licensed tree removal company may be a better option.
- For more information on storm safety, visit uppco.com.
